Upwork Portfolio — Ravi Soni

Sep 28, 2026 · @Ravi Soni

Eight portfolio pieces pulled from your live CV data at torotech.ca/ravisoni, written in Upwork's format — title, category, description, skills tags, media to attach. Copy each into a new Upwork portfolio item.

How Upwork portfolio fields work

Each portfolio item on Upwork takes the same five things:

Field	What it needs
Title	A short, specific name — the outcome, not just the tech ("AI shipment dashboard", not "SAP project")
Cover image / video	1 image or a short screen recording; this is what gets scanned first, so it matters more than the description
Description	2–4 sentences: the problem, what you built, the result
Skills tags	Up to a handful of tags matching your profile's skill list
Project URL (optional)	A live link if the client allows it; leave blank for confidential work

Eight pieces below, each ready to copy into a new portfolio item.

Quick reference

#	Title	Category	Media ready?
1	AI-Enabled Consulting Site with Live Interactive Demos	Full-Stack Dev, AI Integration	Record a screen capture

#	Title	Category	Media ready?
2	AI Shipment Visibility & Chat Assistant	SAP Fiori/UI5, AI Integration	2 screenshots ready
3	Conversational Field Visit Logging App	AI/LLM Integration, Mobile	1 screenshot + 1 video ready
4	EDI Fulfillment Tracker	SAP Fiori/UI5, Integration	3 screenshots ready
5	Customer Sales 360° Dashboard	Business Intelligence, SAP Fiori	2 screenshots ready
6	Sales Lead Comparative Dashboard	Business Intelligence, SAP Fiori	1 screenshot ready
7	EWM Warehouse Barcode Scanner	Mobile Development, SAP EWM	Record a phone screen capture
8	Enterprise-Scale Fiori Rollout (400+ apps)	SAP Fiori, Program Delivery	Build a simple stat graphic

1. AI-Enabled Consulting Site with Live Interactive Demos

Category: Full-Stack Development, AI Integration

Description: Built and ship my own consulting site end to end — Next.js/TypeScript frontend, an embedded DuckDB content store instead of a heavier CMS, custom auth, and an admin panel non-developers can publish from. Each service page carries a working interactive demo I coded from scratch: a Fiori-style approval inbox, a BI dashboard with live drill-down charts, an n8n-style workflow builder, and a Playwright bug-hunt game — so visitors experience the pattern instead of reading about it. Deployed on my own VPS with CI/CD via GitHub Actions.

Skills tags: Next.js, TypeScript, React, Node.js, DuckDB, Docker, CI/CD, AI Integration

Media: Record a 30–45s screen capture of torotech.ca and one interactive demo, e.g. torotech.ca/services/sap-btp-development

Project URL: https://torotech.ca

2. AI Shipment Visibility & Chat Assistant

Category: SAP Fiori/UI5, AI Integration

Description: Built "Ship Sum," a Fiori Elements app on SAP RAP with an OData V4 service, giving dispatchers one screen for every shipment: route, driver, vehicle, trailer and stops, with traffic-light flags for late or out-of-sequence deliveries. Added a built-in AI assistant that answers plain-language questions straight from live SAP data — day summaries, driver rankings, filterable tables — with no exports or pivot tables.

Skills tags: SAP Fiori Elements, RAP, OData V4, SAPUI5, AI Integration

Media: Screenshot 1 · Screenshot 2 — download and attach both

Project URL: none — confidential client work, describe by industry only

3. Conversational Field Visit Logging App

Category: AI/LLM Integration, Mobile, SAPUI5

Description: Built "Field App Chat" for a food distributor's field sales reps: a chat-driven visit-logging flow that replaces a traditional form. The app steps reps through each required field, resolves SAP master data as they go, and uses an LLM (Claude Haiku 4.5 via OpenRouter) to interpret free text and clean up notes. Delivered in 2 weeks.

Skills tags: SAPUI5, LLM Integration, OpenRouter, Conversational UI, SAP Master Data

Media: Screenshot · Screen recording — the video is your strongest asset here, lead with it

Project URL: none — confidential client work

4. EDI Fulfillment Tracker

Category: SAP Fiori/UI5, System Integration

Description: Built a custom SAPUI5 app that tracks incoming EDI iDocs and documents end to end, with a JSON/XML/PDF viewer and a document-flow tree so ops teams can trace a shipment's paperwork without digging through transaction codes. 6-month engagement for a food distributor.

Skills tags: SAP Fiori, SAPUI5, EDI/iDoc Integration, Document Flow

Media: Screenshot 1 · Screenshot 2 · Screenshot 3

Project URL: none — confidential client work

5. Customer Sales 360° Dashboard

Category: Business Intelligence, SAP Fiori

Description: Built a single-customer 360° dashboard covering master data, AR and profitability history, product voids, sales averages, account blocks and recent orders — one page, no spreadsheet reconciliation. Built for a food distributor's sales team.

Skills tags: SAP Fiori, SAPUI5, Business Intelligence, Dashboard Design

Media: Screenshot 1 · Screenshot 2

Project URL: none — confidential client work

6. Sales Lead Comparative Dashboard

Category: Business Intelligence, SAP Fiori

Description: Built a comparative sales analytics app measuring current-period performance against the prior period across products, customers, ship-tos and materials — the single view a sales lead checks each morning instead of pulling five separate reports.

Skills tags: SAP Fiori, SAPUI5, Business Intelligence, Sales Analytics

Media: Screenshot

Project URL: none — confidential client work

7. EWM Warehouse Barcode Scanner

Category: Mobile Development, SAP EWM

Description: Built a mobile barcode-scanning app for warehouse inventory and bin-to-bin transfers for a furniture retailer, with live stock graphs, complaint logging and reorder triggers — built with SAPUI5 and Cordova for native device camera and scanner access.

Skills tags: SAPUI5, Cordova, Mobile Development, SAP EWM

Media: None uploaded yet — record a 30–60s phone screen capture of a scan-to-transfer flow before publishing this one

Project URL: none — confidential client work

8. Enterprise-Scale Fiori Rollout

Category: SAP Fiori, Program Delivery

Description: Led the rapid deployment of 400+ standard Fiori apps across Plant Maintenance, Materials Management and Quality Management for a large mining company, plus custom adaptations of 6 standard PM apps and deep extensions to My Inbox, My Timesheet and Find Maintenance Notification.

Skills tags: SAP Fiori, S/4HANA, Program Management, Change Management

Media: None uploaded — a simple stat graphic ("400+ apps · 3 modules · 1 rollout") works well here since there's no single screenshot that tells this story

Project URL: none — confidential client work

Skills to add to your profile

Every tag used across the 8 pieces — add whichever aren't already on your Upwork profile so the portfolio items actually match your searchable skills:

- SAP Fiori / Fiori Elements
- SAPUI5
- SAP RAP (RESTful ABAP Programming)
- OData V4
- SAP EWM
- S/4HANA
- Business Intelligence / Dashboard Design
- AI Integration / LLM Integration
- Conversational UI
- Next.js
- TypeScript
- React
- Node.js
- Docker
- CI/CD

- Cordova
- Mobile Development
- Program Management

Before you upload

NDA / client-name caution. Your CV names real clients — Porky Products, Philips Global, plus mining, furniture and water-utility clients across Australia, Kuwait and the US. Descriptions above deliberately say "a food distributor" / "a mining company" instead of the real name, since Upwork portfolios are public. Before you publish, confirm which engagements you're actually clear to name — don't assume, check your contracts or ask.

Media checklist:

- [ ] Download the 8 screenshots and 1 video linked above (right-click → save, or open each URL and save the page)
- [ ] Record a short screen capture of torotech.ca for piece 1
- [ ] Record a phone screen capture for piece 7 (EWM scanner)
- [ ] Build a simple stat graphic for piece 8 (rollout scale)
- [ ] Crop/resize images to a consistent aspect ratio before upload — Upwork's grid looks best with landscape (16:9 or 4:3) covers

Order matters. Upwork shows portfolio items in the order you add them — lead with piece 1 (broadest range) and piece 3 (has a real video, your strongest single asset).
